

## TEC-GUARD SEMI-FLUID H540

TEC-GUARD SEMI-FLUID H540 coating is a versatile coating used for outdoor equipment that is subject for moisture, acid atmospheres and extreme temperature fluctuations. The unique additive package prevents premature wear, clings to moving parts, protects against corrosion and acid situations and insures smooth running operations of all kinds of outdoor heavy equipment.

### APPLICATIONS

TEC-GUARD SEMI-FLUID H540 is an all encompassing coating that will perform the following:

- Lubricates and reduces wear on wire rope, chain links, cables, bushings and bearings
- Clings to parts that are coated will not “sling off”
- Works will on slow turning gear boxes

| Specifications - Typical         |                                  |
|----------------------------------|----------------------------------|
| Thickener Type                   | Calcium                          |
| Texture                          | Stringy                          |
| Color                            | Red/Can be modified if necessary |
| NLGI Grade                       | 00                               |
| Unworked Penetration (ASTM D217) | 405                              |
| Flash Point °F                   | 395                              |
| Viscosity @40°C, CST, (ASTM 445) | 153                              |
| Pour Point °F (ASTM D97)         | 10                               |
